Dear Manager,

I would like to put my twenty years of experience at the service of your company, through the skills acquired in different sectors, roles and ways of working.

It has seen the achievement and enduring ten years of the objectives, balancing between management or technical or commercial solution of the problems, between adaptation or innovation, with the aim of cooperating to solve.

This qualifies me as an analyst programmer with a family of techniques suited to different paradigms, able to anticipate short or long term effects.

Short experience as a team leader, program manager, coordinator, quality manager and integration, paves the way for a possible role of project manager.

Hard skills

Head technician with information technology specialization, graduated with honors, in the first ten years I alternatively perform activities as a programmer, technician and teacher. By maturing the levels in the various roles, I learn and successfully use the tools required by the company.

The areas range from firmware to the front end, back office, from the micro device to the main frame, also working in environments different from Windows. Sectors range from entertainment / Horeca to manufacturing with solutions for optimizing performance or the work processes themselves.

The **recent knowledge** concern: HTML, Javascript, C#, Razor/Asp.Net, JQuery, KnockoutJS.

Short term interests: Angular o React su web/desktop, Xamarin su desktop/mobile, OpenCV/Python for video/image processing.

Future interests: blockchain per certificazione e uso AI per analisi dati.

Soft skills

In the last ten years I specialize in analysis and development with project management and team management moments, without marginalizing support through helpdesk, remotely or with foreign travel. A collateral study also sees me personally involved in the difficult art of restructuring, balancing between conservation and innovation.

For a **detailed view of the skills**, you can follow my CV online at: <file:///home/stefano/develop/GitHub/site/pages/curriculum.htm?lang=en#details#projects>, which is an example web app with links to videos of my creations..

Confident in positive feedback,

best regards.

s.z.
